Mobile gaming trends among Russian speakers. One of the world's most active and engaged gaming communities

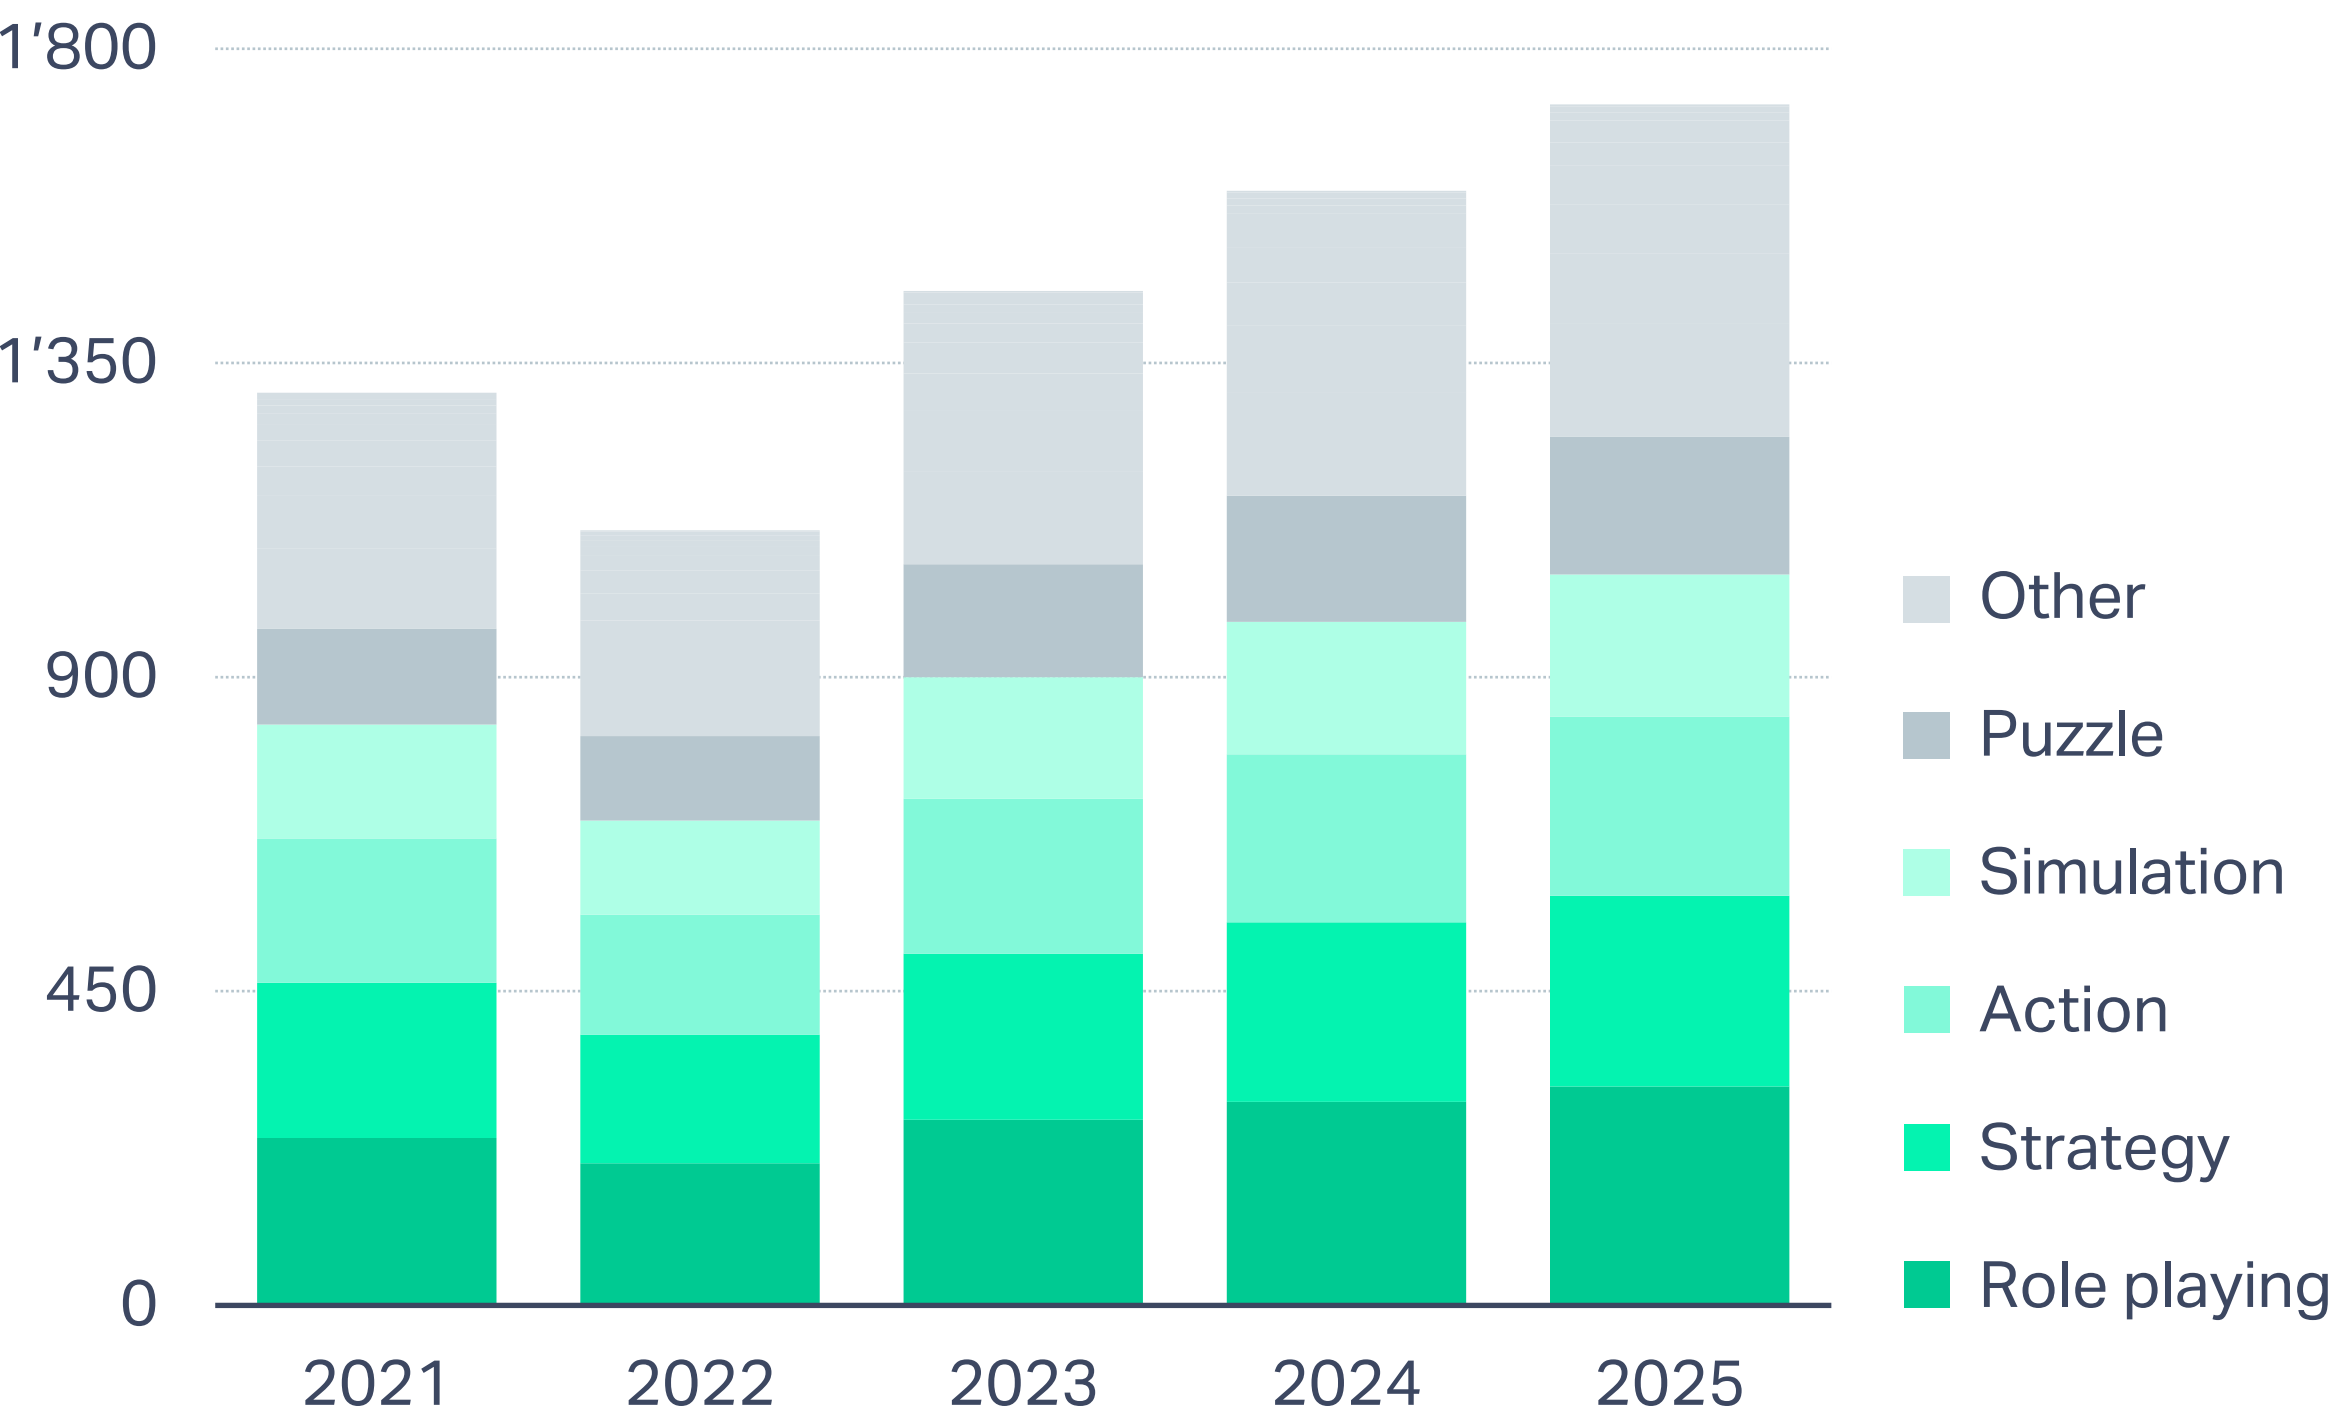

7 out of 10 are active gamers

%, people who play games regularly, by age

App revenue forecast in million USD in Russia by sub-genres

*Strongest game categories in Direct: RPG, Strategy, Casual games (cards, word)

CHALLENGES IN THE RUSSIAN-SPEAKING MARKET

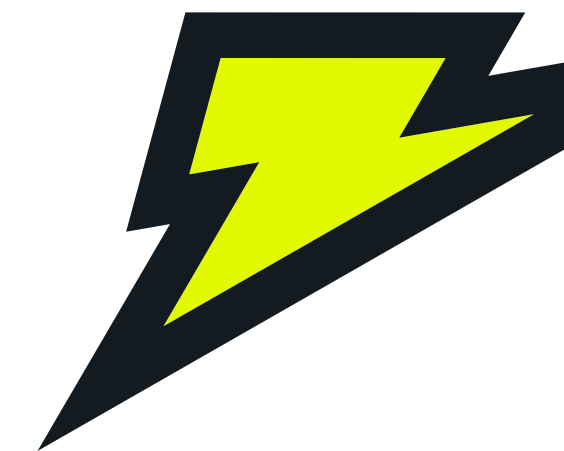

Reaching a large & scattered audience

Connecting with over 100M+ Russian-speaking users spread across multiple platforms is difficult

Navigating strict local rules

Compliance with local advertising regulations is essential but complex

Targeting with precision

Finding the right users for your app can be challenging, especially in a new market

Traffic provided by third-party SSPs

>20 TOP
SSP platforms we work with

Benefits of high-quality traffic from Yandex App campaigns

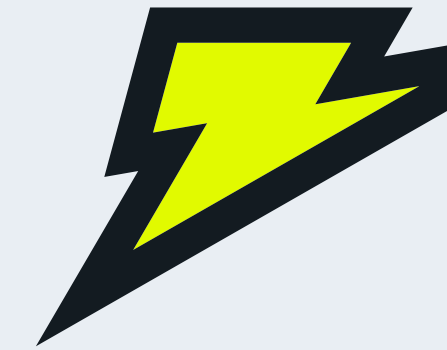

SEARCH AUDIENCE

High-quality traffic,
complete engagement &
unique users seeing your
ad in response to their
search query

HIGH-QUALITY PLACEMENTS

Services and a partner
network with an engaged
audience who use their
websites and apps daily

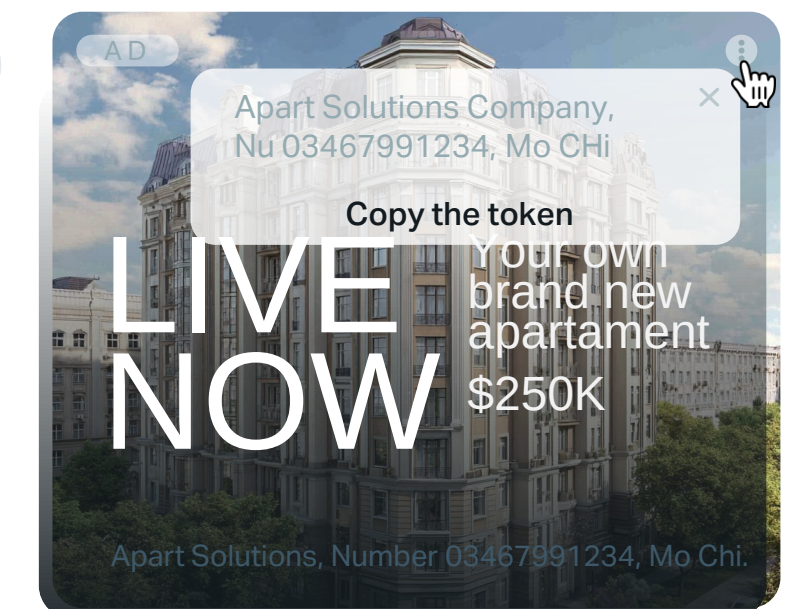

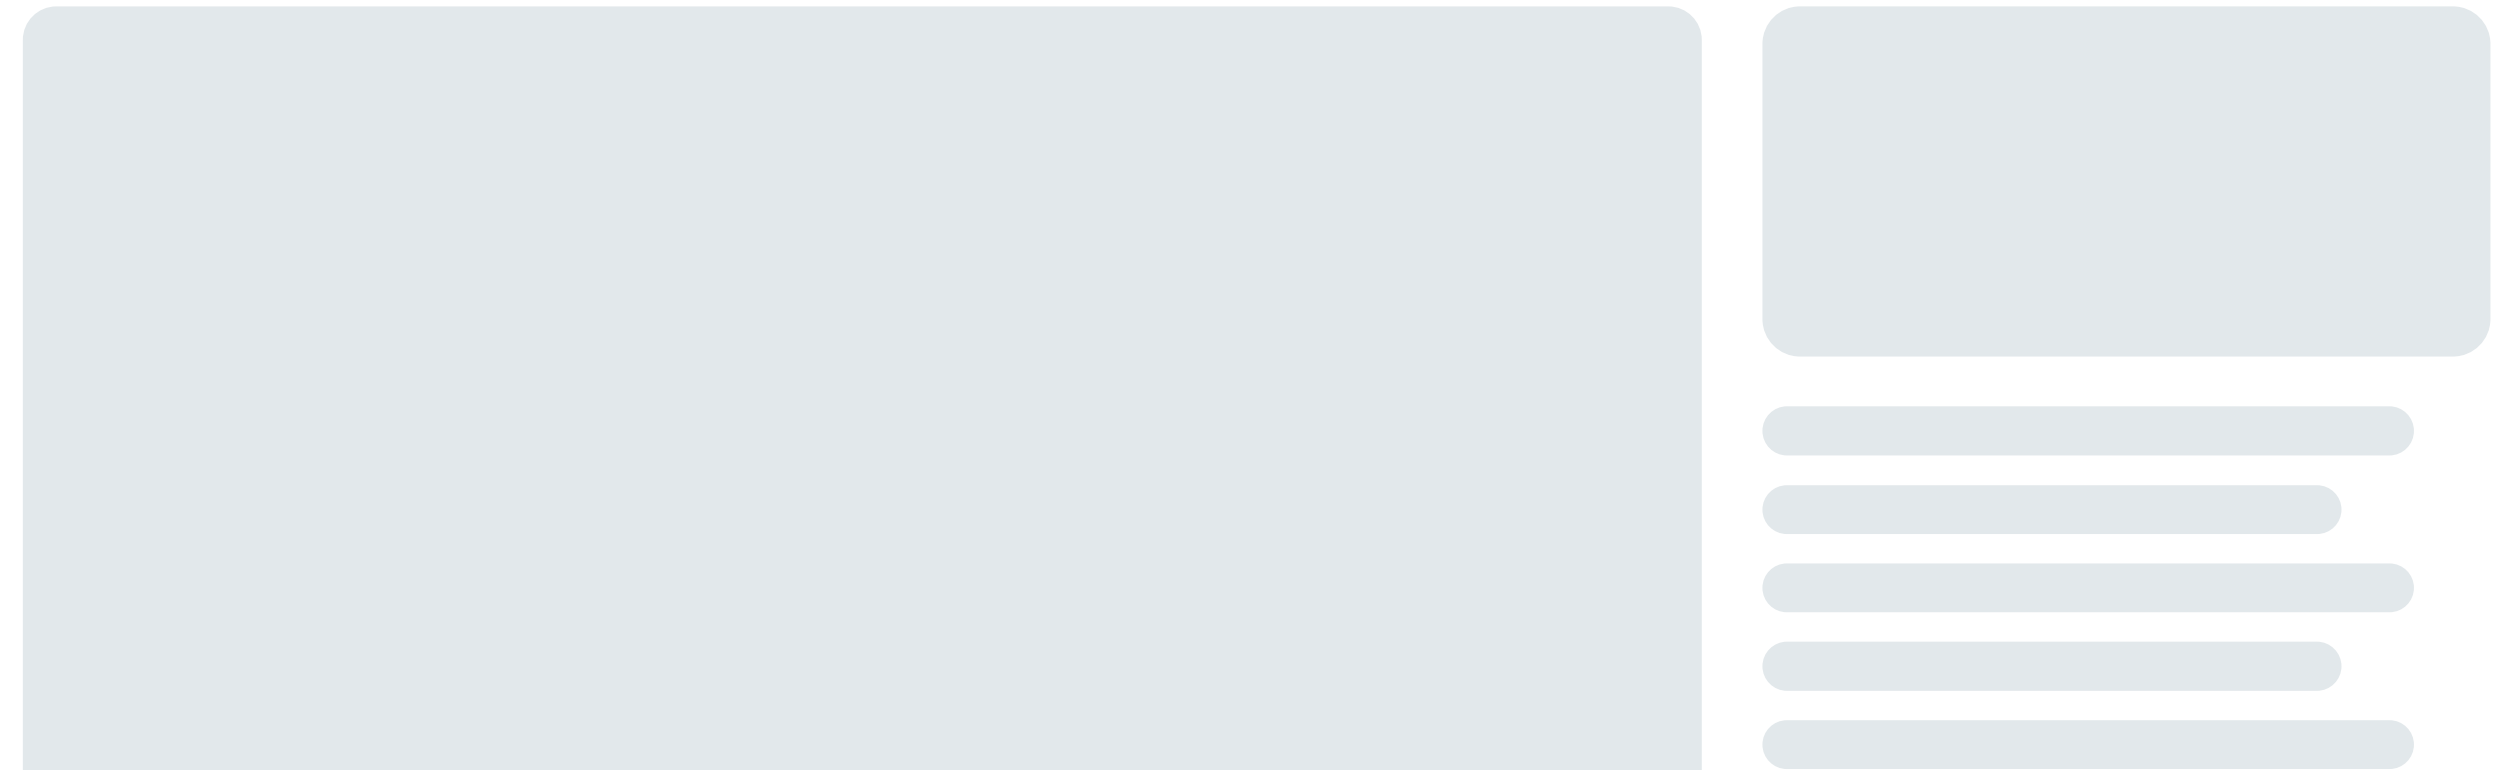

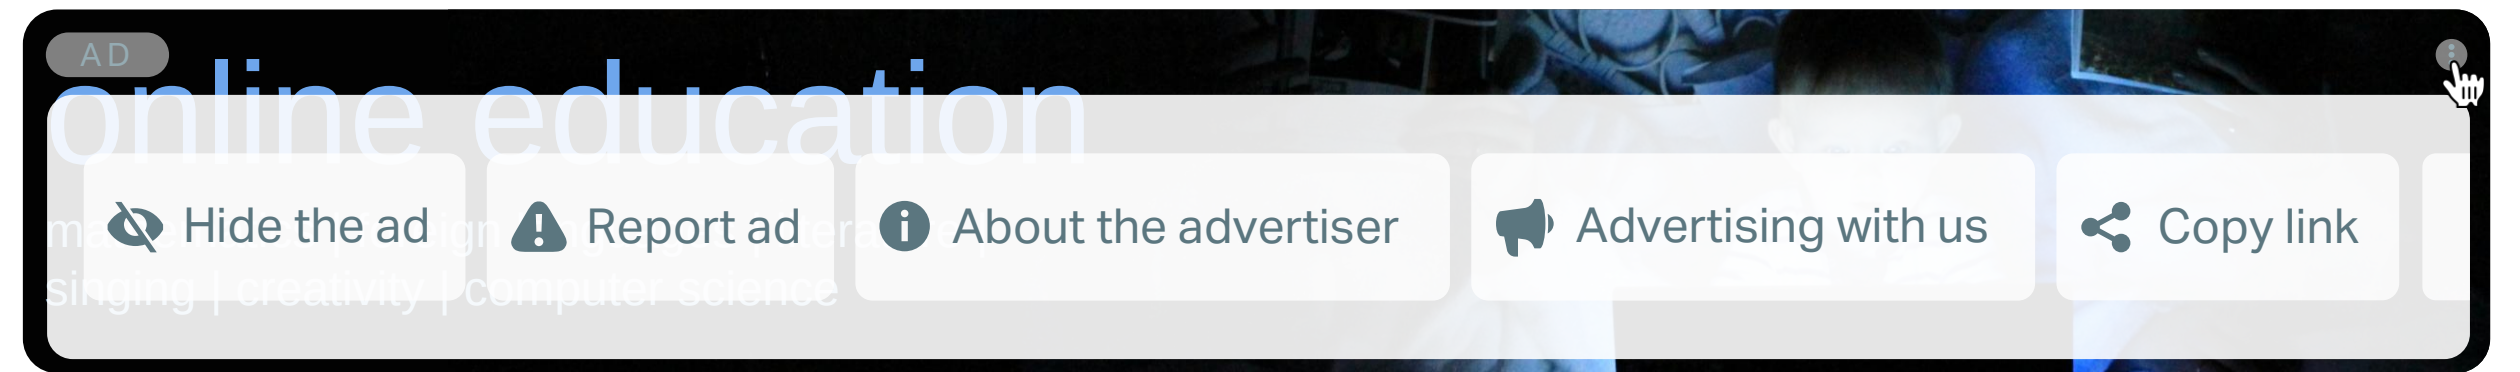

PAY ONLY FOR REAL CLICKS

Our anti-fraud system
filters out low-quality
traffic, ensuring you pay
only for genuine clicks

LOCAL COMPLIANCE MADE SIMPLE

Advertising in the CIS requires
specific compliance steps.
We handle it all

- ✓ Automatic ad marking system
- ✓ Local requirements compliance
- ✓ Easy account creation and setup
- ✓ Start advertising right away

FINDING HIGH-INTENT USERS FOR YOUR APP

Yango App Campaigns uses machine learning to find high-value users who will stay longer and spend more

Most apps face a hard truth:

80%

of users leave
in 3 days

2%

of users drive
60% of revenue

\$

marketing dollars are
spent on users that
bring no real value

That's why targeting is so important

High-value users have distinct
patterns and their early behavior
predicts long-term value

ADVANCED ML FEATURES

Autotargeting

Our algorithms automatically identify the right audience for your mobile app ad, ensuring it aligns with user interests.

The system can even target ads without keywords by leveraging internal settings and a deep understanding of audience preferences and needs

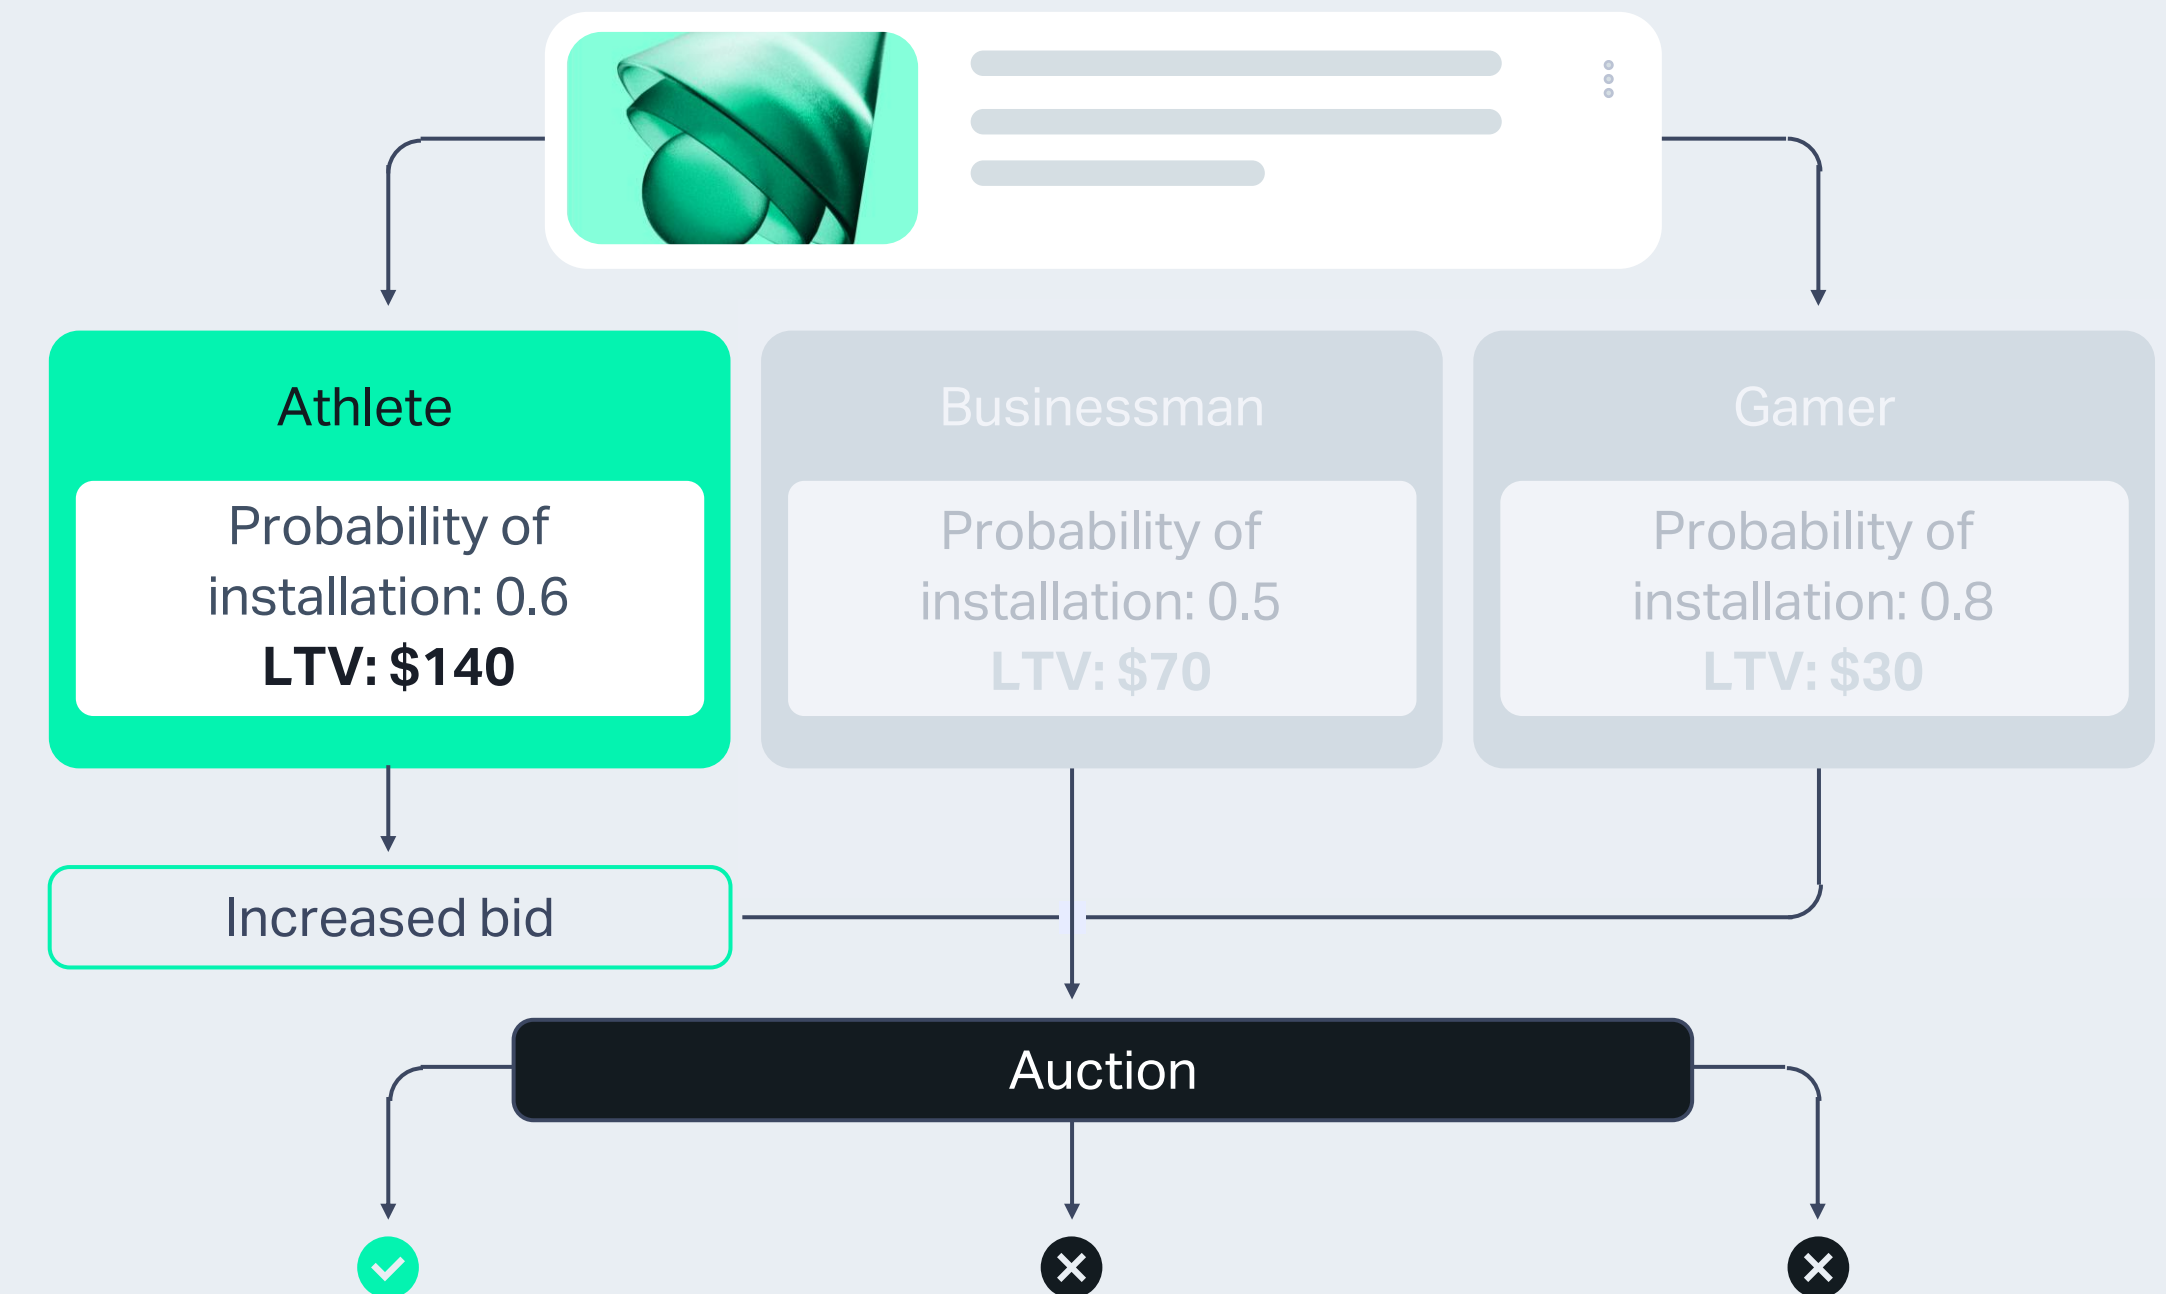

How does it work?

We analyze information on the app page to determine if the ad aligns with the search query, user interests and the website's content

Result

You get precisely targeted traffic that would be difficult to capture through keywords alone

Predictive LTV model

Advanced machine learning algorithms optimize your ads to attract users with the highest potential. The system now evaluates users' potential LTV to target the most valuable audience

KEY STRATEGIES FOR APP CAMPAIGNS

MAXIMUM CLICKS

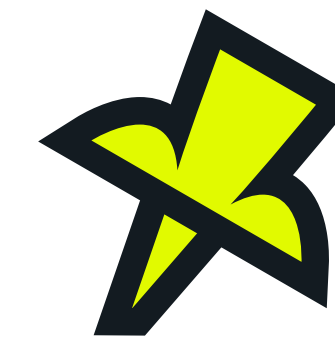

Maximize clicks on your ads

- ✓ Get the most clicks at your target average CPC or within a specified budget
- ✓ Use this strategy when the client has a strict KPI for CPC, or when the main goal is to maximize ad reach without focusing on cost-per-install (CPI)
- ✓ Used to start out and get the most data for algorithm training

MAXIMUM CONVERSIONS

Increase installs and in-app events

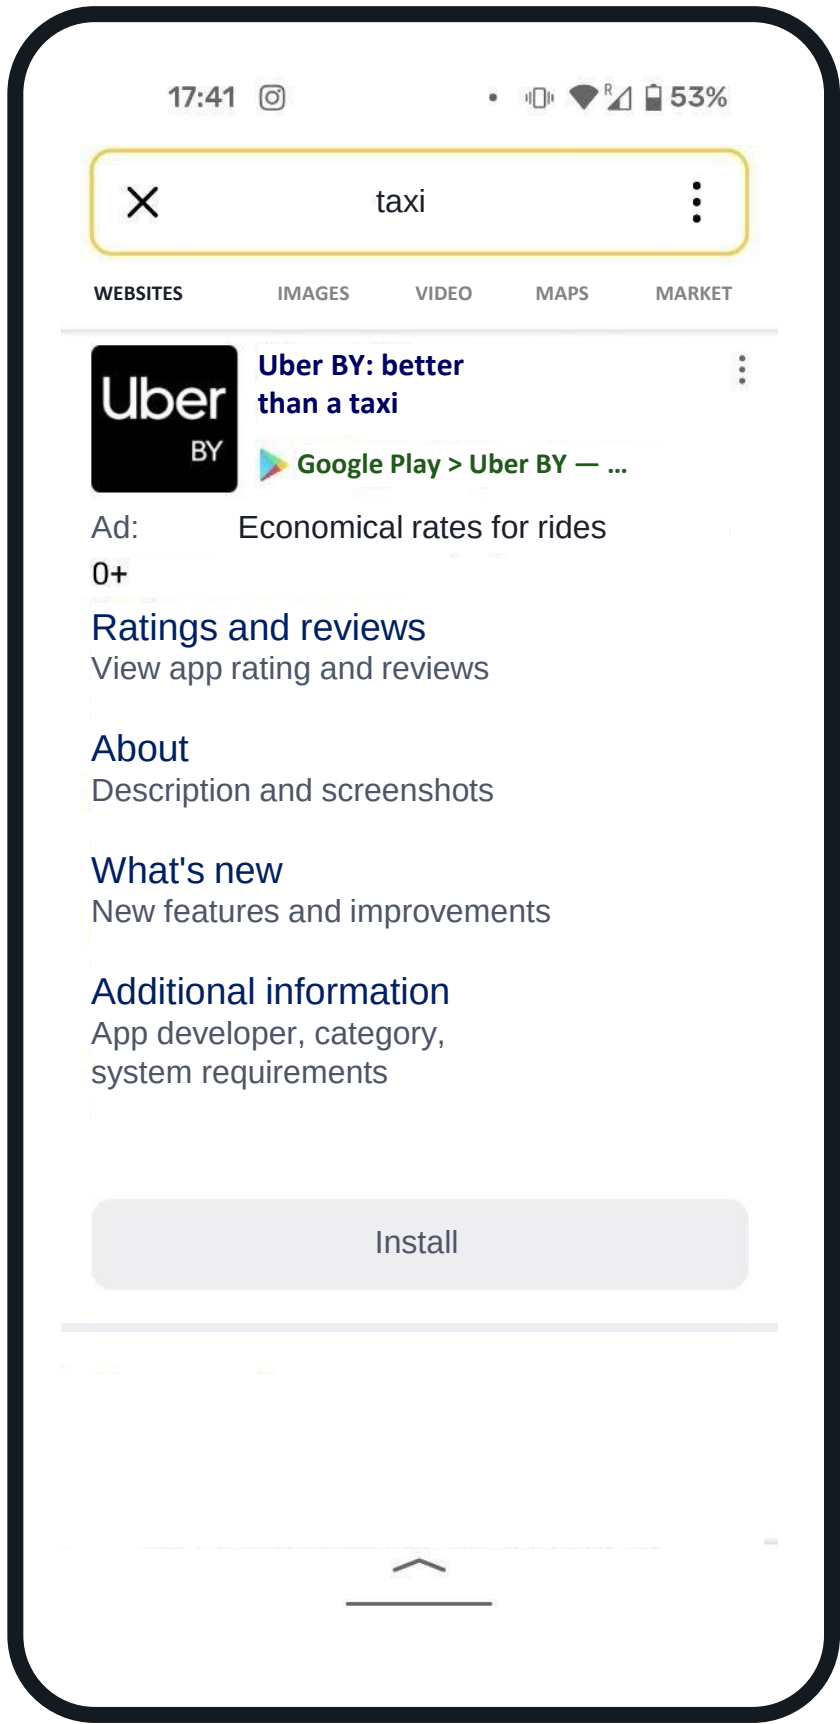

- ✓ Pay only for ad clicks (Avg. CPI) or a fixed cost per install (FixCPI)*
- ✓ Attract new users who perform valuable target actions
- ✓ Use FixCPI if the client has strict KPIs for installs. Otherwise, always start with Avg. CPI

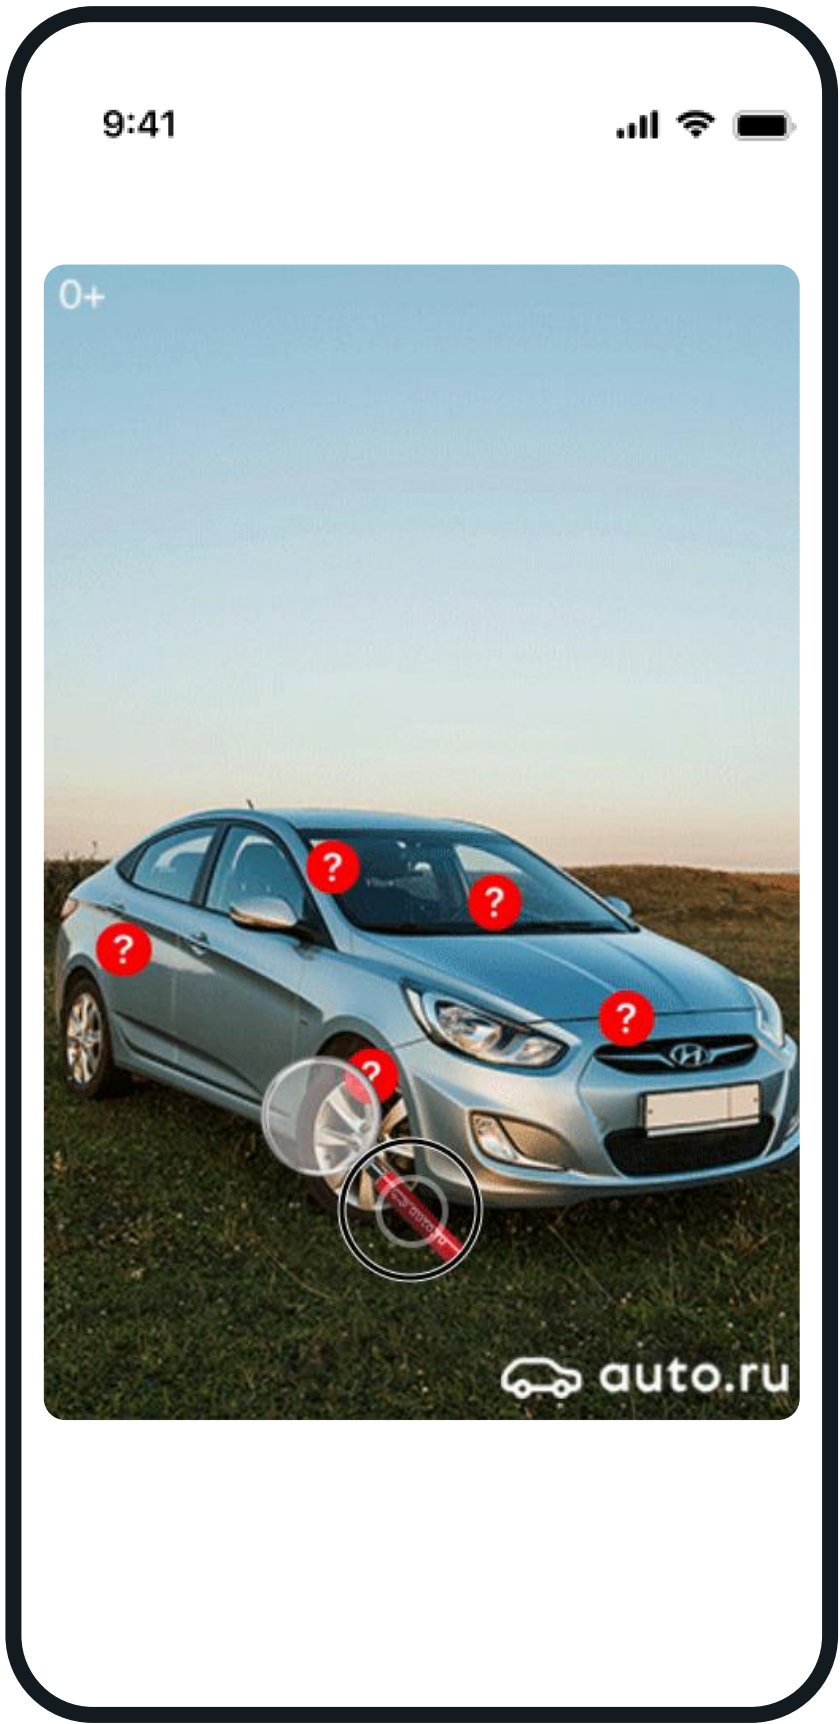

For campaigns with the goal “User Acquisition,” app clients are automatically filtered using Yandex data, so ads are shown only to new audiences

EYE-CATCHING FORMATS FOR YOUR ADS

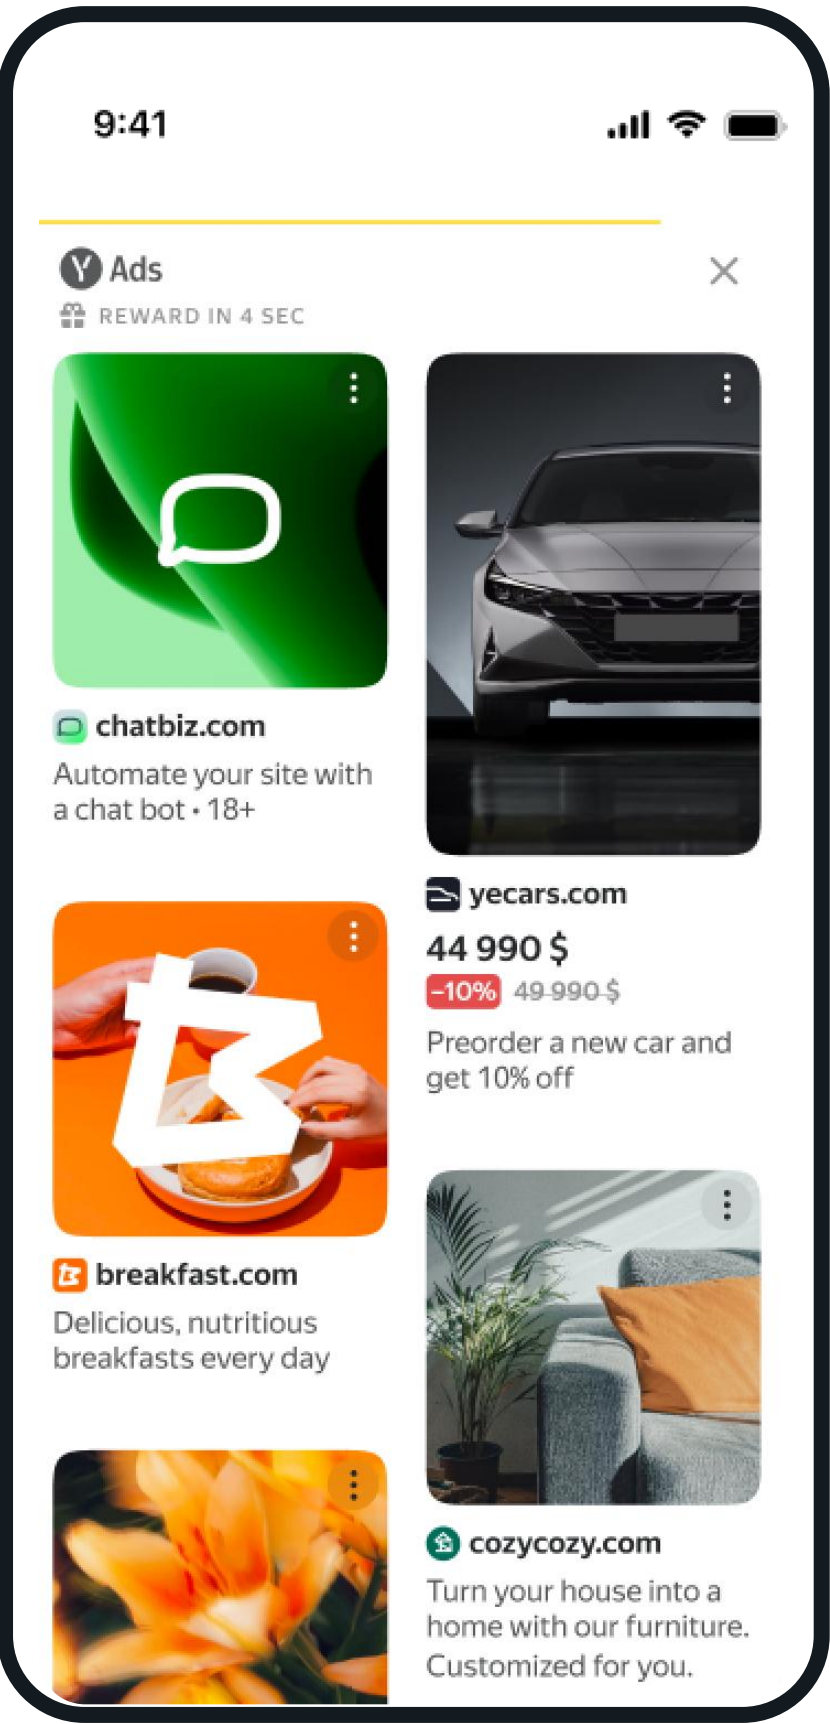

Ad formats on Search

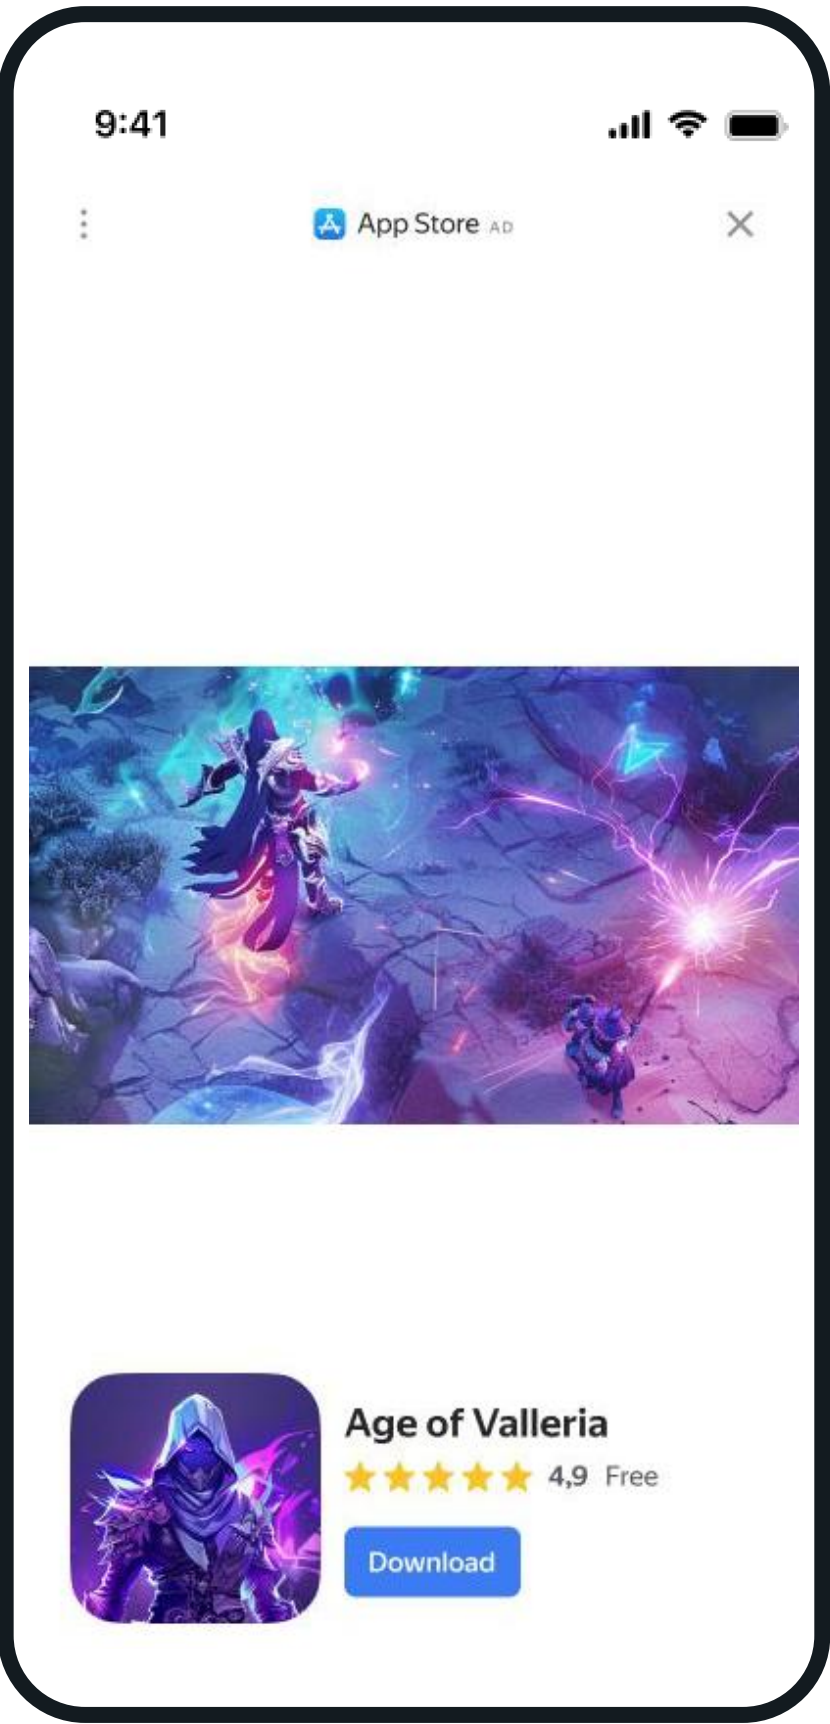

Ads on Ad Network
Playable Ads

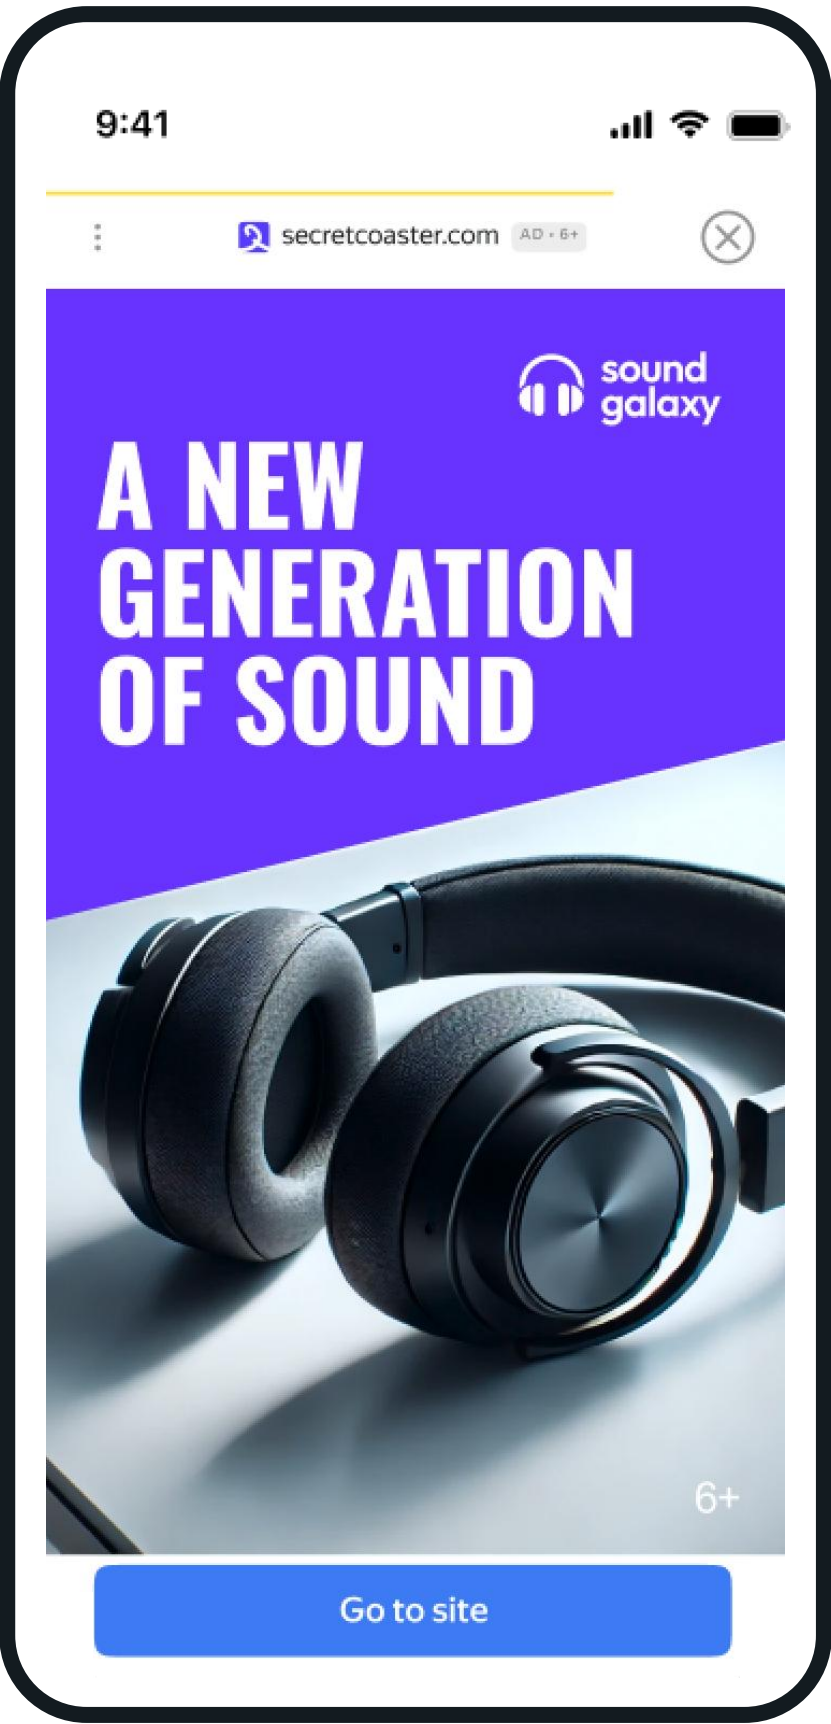

Feed Ads

Video ads in apps

Fullscreen placements

ATTRACT NEW AUDIENCES TO YOUR MOBILE APP WITH PRODUCT ADS

Ads of this type are automatically generated based on your feed data and help you showcase relevant product or service offers to users.

A feed is a file listing the name, description, price, technical specifications, and other information about the product

- Uploading images and videos
- Preview

STARTING AD CAMPAIGN FAQ

	Maximize installs	Attract users who perform target actions
How many events are needed to train the ML?	To train the ML effectively a campaign needs at least: 10 or 70 install s a day installs a week	To optimize your campaign, choose one event with at least: 10 or 70 in-app events conversions per week
How much does is cost to set up an event?	Set the CPI rate higher for iOS than for Android	Set the avgCPA 30% higher than the actual CPA in a campaign with payment by CPI

BEST PRACTICES TO SET UP A CAMPAIGN

+ Do not blacklist too many sources during the first two weeks of placement

Allow our ML algorithm to identify the best traffic sources for the campaign

+ Use historical data

Base your bidding strategy on past data to improve campaign impressions

+ Send Yango App Campaigns non-attributed conversions from other sources

We can use them to train your campaigns better

+ Do not make significant changes during the first 2 weeks of placement

After the campaign has learned, avoid making changes more often than once a week with adjustments greater than 30% e.g., changing the bid or weekly budget

+ Update creatives to avoid burnout

Use different formats and sizes, and mix static ads and videos

+ Set the event attribution window at

7 days for clicks and 24 hours for impressions
